

# BG Artforms© - TBC Mandrel System

## Turning Between Centers Mandrel System

### Key Features:

- Turn more consistent, concentric pen blanks between centers.
- Use **ANY** existing bushings that will fit a standard 7 mm mandrel.
- Reduces “out of round” pen blanks.

**Parts Included:** Dead Center with 7mm shaft and Live Tail Center with 7mm shaft.

Firmly insert the dead drive center into the head stock and the live tail center into the tail stock.

To ensure the most accurate turning, bring the tail stock up to meet the head stock by just touching the two 7 mm shafts to make sure they line up so they will turn concentrically.

Place the appropriate bushings on both ends of the 7 mm shafts of the head and tail stocks.

Insert your bushings into your pen blank and place your blank in-between the dead head stock and live tail stock. Turn the blank to the desired height of the bushings and use a finish of your choice.
